

IN WHICH LEAGUE DO YOU PLAY WITH 1200 KW TURF HEATING?

The ewers Station for district heating

Initial situation

A major construction project in Verl is the reconstruction of the soccer stadium, including the installation of a turf heating system - in times of difficult to imagine in times of energy crisis, but still a requirement of the DFB from the 3rd league. This is to be connected to the district heating of the city of Verl.

In Verl, the area of Poststraße around the Sportclub Arena will be connected to the district heating network. To this end, the city is laying around 800 meters of new pipes. The stadium in Verl will also be connected to operate the turf heating system.

The district heating transfer station for the comes from ewers and is designed with a capacity of 1200 kW.

If you have any questions, please do not hesitate to us at any time.
